

**Amendments to the Specification:**

Please replace the last paragraph on page 8 with the following amended paragraph:

At decision block 320 it is determined whether this order is the customers first order and if the customer is refilling a prescription they have received at a particular pharmacy store location. If the user is selecting on-line for the first time the user is given a choice as to the delivery method in block 322. Here the user may select between either having the order shipped from one or more distribution facilities, such as one or more shipping facilities, or may locate and select a pharmacy store for pick-up of the prescription. If the user selects shipping delivery as indicated at block 328 the order is sent to a shipping facility where the prescription is filled and mailed out. Otherwise, an order for the prescription is sent to the store location selected at block 324 which automatically receives the prescription order via the application server 108 and internet server 112 as shown in Figure 1. The order is then processed and filled by personnel at the pharmacy store location selected. If the order is not the users first order as determined at decision block 320, the user is given the option to select the last pharmacy store location they used and information such as the store number, address, pharmacy phone and pharmacy hours may be displayed. Otherwise, the user may also select a shipping delivery request for mailing of the prescription or locate and select another store for pick-up.
